REFERRAL TO

Specialty: Breast Surgical Oncology

Reason: Abnormal Mammogram - BI-RADS 5

Urgency: STAT / Immediate (within 24-48 hours)

CLINICAL SUMMARY

60-year-old female, G2P2, post-menopausal. Routine screening mammogram performed on 11/27/2025 revealed a new, 2.2cm irregular spiculated mass in the left breast (upper outer quadrant) with associated pleomorphic calcifications. No palpable axillary adenopathy on clinical exam today, but ultrasound suggests suspicious node in left axilla level I.

Imaging Report (11/27/2025):

- Left Breast: BI-RADS 5 (Highly Suggestive of Malignancy)
- Right Breast: BI-RADS 1 (Negative)

REQUESTED SERVICES

- Surgical Oncology Consult
- Ultrasound-guided Core Needle Biopsy (Left Breast Mass + Axillary Node)
- Receptor status testing (ER/PR/HER2) upon biopsy confirmation
