Phone: (512) 555-8821  
Email:

a.chen95@webmail.com

Insurance: Aetna Select  
Policy ID: W123456789

Dear Dr. Rodriguez,

I am requesting a STAT neurological evaluation for Ms. Amanda Chen, who presented to our clinic following a witnessed syncopal episode with tonic-clonic movements lasting approximately 2 minutes this morning.

Clinical History:

The patient has no prior history of seizures. She has a history of Migraine with Aura (diagnosed 2015) and mild Anxiety. Post-ictal state lasted 15 minutes.

- Observations: Patient is currently alert and oriented x3 but complains of severe headache (7/10) and tongue soreness.
- Vitals: BP 110/70, HR 82, Temp 98.6°F.
- Neuro Exam: No focal deficits noted, PERRLA intact.
- Allergies: Sulfa Drugs (Rash).

Current Medications:

1. Sumatriptan 50mg PRN (Migraine)
2. Sertraline 50mg daily
3. Multivitamin daily

Urgency & Logistics:

Given the new onset and lack of known triggers, we request an EEG and MRI brain as soon as possible. We are marking this referral as STAT.

Sincerely,

*(Signed)*

Dr. Linda Morris, DO
